Isn’t it time to see what you’ve been missing?

CATALYS®
Precision Laser System

The world’s most sophisticated laser cataract surgery system
A cataract is a common condition in which the normally clear lens of the eye becomes increasingly cloudy. Compared to vision with a clear lens, your vision with a cataract may look fuzzy, colors might be muted, and you may experience difficulty reading signs while driving at night.

The symptoms of cataracts are progressive and can not be corrected with glasses or contacts. When symptoms become bothersome or limit your daily activities, it’s time to consider treatment.

Treatment for cataracts involves a simple surgery to remove the cataract and replace it with an artificial lens that can restore clear vision. Cataract surgery is the most common surgical procedure worldwide and is very safe and successful.
Many of the steps of cataract surgery that are traditionally performed using handheld instruments can now be completed using the precision of a laser. The CATALYS® Precision Laser System—developed in the heart of Silicon Valley—is the world’s most sophisticated laser cataract surgery system. Thousands of patients have been successfully treated.

Using CATALYS, your surgeon can provide you with a highly customized, more accurate, and gentle treatment.
Clinical studies have shown that this opening is approximately 10 times more accurate when performed with CATALYS than what is achievable by hand.\textsuperscript{[1,2]}

### Customization with 3D imaging
Like a fingerprint, every eye has a unique size and shape. Prior to treatment, CATALYS images your eye and makes precise 3D maps of relevant structures. This enables your surgeon to create a tailored treatment plan that is customized for your eye.

### Laser precision
Your surgeon can use CATALYS to create a perfectly sized, shaped and centered circular opening to access and remove the cataract. This precise incision helps your surgeon place the new artificial lens exactly where intended.

**Gentle approach**

Your surgeon can use the laser to soften the hard cataract. Softening the lens with the CATALYS laser enables your surgeon to remove the cataract more gently and with significantly less ultrasound energy than is used in traditional manual cataract surgery. This gentle, low energy approach reduces inflammation and helps speed visual recovery.\[^{3,4,5}\]

**May decrease need for glasses**

If you desire to see well without glasses or contacts after surgery, ask about your options. Your surgeon may recommend a tailored treatment that could include precise CATALYS laser incisions in the cornea and a specific lens implant type.

**Lens implant types:**

- monofocal lens for vision at one distance
- multifocal or accommodating lens for near, intermediate and far vision
- toric lens for correcting higher levels of astigmatism
“It was so easy, and it was done so quickly. You don’t feel anything at all, and you have this amazing vision afterwards.”

Patricia, CATALYS Patient
Treated in February 2012
Quick treatment:
Cataract surgery usually takes less than 30 minutes. The CATALYS laser portion of treatment usually takes just a few minutes.

Comfort:
You can expect little or no discomfort during treatment and after surgery. During the laser portion, patients describe seeing a kaleidoscope of lights.

Speedy recovery:
Most people resume normal activities the very next day. And your sight may continue to improve for several days or weeks after surgery.
Ask your doctor if laser cataract surgery with the **CATALYS® Precision Laser System** is right for you.

**Indications for Use**

The OptiMedica CATALYS Precision Laser System is indicated for use in patients undergoing cataract surgery for removal of the crystalline lens. Intended use in cataract surgery includes anterior capsulotomy, phacoemulsification, and the creation of single plane and multiple arc cuts/incisions in the cornea, each of which may be performed either individually or consecutively during the same surgery.

Contraindications, warnings, precautions and adverse events are listed in the CATALYS Precision Laser system Operator Manual. Your doctor will be able to discuss these topics with you.
